HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Applicant claims a luminescent device comprising a hole transporting region disposed between an anode and a cathode comprising a first layer with a hole injecting material; a second layer having a hole transporting layer; and a mixed layer disposed between the first and second layer comprising a hole injecting material and hole transporting material with the hole injecting material having a smaller ionization potential than the hole transporting layer and the hole transporting layer has a larger hole mobility than the hole injecting material wherein there is a concentration gradient with the hole transporting material is increased toward the cathode from the anode and the hole injecting material has a concentration decreasing from the cathode to the anode.

2. Additionally, applicant claims a luminescent device comprising an electron transporting region disposed between an anode and a cathode comprising a first layer with an electron injecting material; a second layer having an electron transporting layer; and a mixed layer disposed between the first and second layer comprising an electron injecting material and an electron transporting material with the hole injecting material having a smaller ionization potential than the electron transporting layer and the electron transporting layer has a larger hole mobility than the electron injecting material wherein there is a concentration gradient with the electron transporting material is increased toward the cathode from the anode and the electron injecting material has a concentration decreasing from the cathode to the anode.

3. Applicant claims a luminescent device comprising an anode and a cathode with a luminescent layer disposed between the anode and the cathode and a blocking layer adjacent to the luminescent layer with both the blocking material and the luminescent material having

Art Unit: 1794

electron transport properties and the energy difference between the highest occupied molecular orbital and the lowest unoccupied molecular orbital in the blocking material is larger than the energy difference of the highest occupied molecular orbital and the lowest unoccupied molecular orbital in the luminescent material wherein there is a concentration gradient of the luminescent material is decreased in a direction towards the cathode from the anode and the blocking material is increased in the direction toward the cathode from the anode.

4. Also, applicant claims a luminescent device comprising an anode and a cathode and disposed therebetween a first mixed region comprising hole injection and hole transporting materials; a second mixed region comprising a hole transporting material and a host material; a third mixed region comprising a host material and a blocking material; a fourth mixed region comprising an electron injecting material and an electron transporting material with a concentration gradient as recited in claims 30, 114 and 121.

5. Applicant claims a luminescent device comprising an anode and a cathode and disposed therebetween a first layer comprising a hole injecting material and a hole transporting material; a second layer comprising a host material; a third layer comprising a blocking material; and a fourth layer comprising an electron injecting material.

6. The closest prior art, Aziz et al., U.S. Patent Number 6,773,830, teaches a light emitting device comprising an anode and a cathode with a hole transporting region and electron transporting region disposed therebetween with the hole transporting region comprising a layer of hole injecting material; a layer of hole injecting material and hole transporting material; a layer of hole transporting material and the electron transporting region comprises a layer of

Art Unit: 1794

electron injecting material; a layer comprising an electron transporting material and an electron transporting material; a layer of electron transporting material.

7. Aziz fails to teach or suggest a concentration gradient between the hole injecting material and the hole transporting material in the hole transporting region and a concentration gradient between the electron injecting material and the electron transporting material in the electron transporting region.

CONCLUSION

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee, and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
